

Exception Handling

1. What is an exception in Python?
2. What is the difference between an error and an exception?
3. Why do we need exception handling in Python?
4. What is the purpose of the try block?
5. What is the purpose of the except block?
6. What is the purpose of the else block?
7. What is the purpose of the finally block? Will it always execute?
8. What is the difference between except and finally?
9. What is the difference between except Exception as e and except ZeroDivisionError?
10. What information does the variable e (or err) contain in except Exception as e?
