

1. Student Information System

Create a Student class with:

- name
- roll_no
- branch
- marks

Create 3 student objects and create a method display() to print their details.

2. Employee Salary

Create an Employee class with:

- name
- employee_id
- salary

Create a method display_salary() that displays the employee's salary.

Create 3 employee objects.

: Don't assign the values directly inside the class. Pass them while creating objects.

3. Mobile Phone

Create a Mobile class with:

- brand
- model
- price

Create a method:

display_details()

Create 3 mobile objects with different information.

Expected concept: Constructor + objects.
