

❖ Console Input/Output

1. What is the difference between `print()` and `input()`?
2. What datatype does the `input()` function return by default?
3. Why do we use `int(input())` instead of only `input()`?
4. What is the purpose of the `print()` function?
5. What is the purpose of the `end` parameter in the `print()` function?
6. What are f-strings? Why are they preferred over string concatenation?
7. What is the difference between string concatenation and f-string formatting?
8. What are different ways to format output in Python?

❖ Conditional Statements

1. What are Decision Control Statements in Python?
2. What is the difference between `if`, `if-else`, and `if-elif-else`?
3. Can we write an `if` statement without an `else` block?
4. What is a Nested `if` statement? Give a real-world example.
5. What is the difference between Nested `if` and `if-elif-else`?
6. What is the `match-case` statement?
7. Why is there no `break` statement in Python's `match-case`?
8. What is the Ternary Operator in Python? Write its syntax.
9. Can we use `elif` directly inside a ternary operator?
10. When should you use `match-case` instead of `if-elif-else`?

❖ Loops

1. What are loops? Why are they used?
2. What is the difference between a for loop and a while loop?
3. When should you use a while loop instead of a for loop?
4. What is an infinite loop? How can you avoid it?
5. Explain range() function with examples.
6. What is the difference between break and continue?
7. What is the purpose of the pass statement?
8. Can we use break and continue inside both for and while loops?
9. What is a Nested Loop?
10. How many times will the inner loop execute if the outer loop runs 5 times and the inner loop runs 3 times?
