

❖ Tuple Interview Questions

1. What is a Tuple in Python? What are its main characteristics?
2. What is the difference between a List and a Tuple?
3. Why are Tuples immutable? What are the advantages of immutability?
4. How do you create a Tuple in Python? Explain different ways with examples.
5. How do you create a Tuple containing only one element? Why is a comma (,) required?

Example:

```
t = (10,)
```

6. Explain positive indexing, negative indexing, and slicing in Tuples with examples.
7. Can we modify, add, or remove elements from a Tuple? Why or why not?
8. What are the built-in methods available for Tuples?
9. What is the difference between count() and index() methods?
10. Can a Tuple contain mutable objects such as a List or Dictionary? Explain with an example.
11. How do you convert a List into a Tuple and a Tuple into a List?
12. What is the difference between Tuple concatenation (+) and repetition (*)?
13. How do you iterate through the elements of a Tuple?
14. When should you use a Tuple instead of a List?
15. Can a Tuple contain duplicate values? Does it maintain insertion order?
16. Name and explain five built-in functions that work with Tuples.
