

1. What is a Set in Python? What are its main characteristics?
2. What is the difference between a List and a Set?
3. Why are Sets unordered? What does unordered mean?
4. How do you create a Set in Python? Explain different ways with examples.
5. Can a Set contain mutable objects like Lists or Dictionaries? Why or why not?
6. What is the difference between `remove()` and `discard()` methods?
7. What is the difference between `pop()` in a List and `pop()` in a Set?
8. What is the difference between `add()` and `update()` methods?
9. Explain the following Set operations with examples:
 - Union
 - Intersection
 - Difference
10. What is the difference between `union()` and `update()`?
11. Can Sets be indexed or sliced? Why?
12. How do you remove duplicate elements from a List using a Set?
13. Can a Set contain another Set? If not, what should be used instead?
14. Name and explain the most commonly used Set methods in Python.
15. Can a Set contain duplicate tuples? Why?
